

Beyond Heroes

Version-by-version changelog

BH-016 through BH-020

The two latest earlier Git updates, followed by the socketing and town work continued from Claude Code and the completion fixes.

The BH numbers are development update identifiers found in this repository. They are not semantic release tags. Earlier Git history is outside this report.

Update	Contents	Git reference
BH-016	Skills, Guild House, player trading	4f0b64b
BH-017	Merchant Rows, effects, companions	05d8219
BH-018	Sockets, crystals, town redesign	Current completion
BH-019	Lape, practice dummies, shared vault	Current completion
BH-020	Shop access, labels, release checks	Current completion

Repository: github.com/lemonquake/beyond-heroes

BH-016 - Skills, Guild House and player trading

Git commit: 4f0b64b (29 September 2026).

- All skill and talent nodes can reach level 25. Effects up to the former cap retain their old values; additional levels use a taper of 0.5 normal ranks, or 0.1 for single-rank abilities and keystones. Tooltips, tree displays and saved ranks support the new cap. The character level cap and point income remain unchanged.
- Added the Guild House exterior and interior in Malasugue, with steward Hollis Varnay, Swordfin clerk Bram Ostler and Lantern clerk Sabeth Wynn, guild counters, banners and two job boards. The town well and Seris were repositioned to make space.
- Guild boards show registration or transfer, membership benefits and four level-appropriate jobs. Heroes can carry up to three jobs from their guild. Objectives include combat, exploration, gathering and crafting. Handing in a completed job pays gold once, with a 5% bonus per guild tier; postings refresh as jobs are taken or completed. Job state is saved with the hero.
- Added multiplayer player trading through nearby heroes, party frames and the Multiplayer window. Offer up to ten items plus gold. Both players must accept the same offer revision; changing an offer resets acceptance. Locked, favorite and quest items are refused. Inventory capacity, ownership and funds are checked before the exchange. Closing or disconnecting cancels the trade.
- Multiplayer protocol advanced to 5. Added guild-house, job, progression and two-process trade tests, plus desktop and touch-layout captures.

Sources: [work/lemondev/bh-016/handoff.md](#), [work/lemondev/bh-016/contract.md](#), and the commit diff. The earlier handoff records 1,394 checks in the new BH-016 suite and successful host/client trade probes. It does not claim physical-phone testing.

BH-017 - Merchant Rows, combat effects and companions

Git commit: 05d8219 (29 September 2026).

- Added Merchant Row in Malasugue, Market Row in Olivar and Quartermaster Row in Wyman. Merchants, the rare dealer, three crafting stations and the Malasugue Tempo shrine use coordinated locations from a shared town table. Trade objects identify the stands; nearby nameplates identify their owners. Updated town layouts, world-map routes, dialogue and the guide.
- Added five buffs: Vigor, Keen Focus, Windstep, Titan's Might and Spirit Ward. Added five debuffs: Grievous Wound, Enfeebled, Dazzled, Sundered and Demoralized. Grievous Wound reduces healing and regeneration by 25% per stack, up to three stacks. The effects are connected to monsters, skills, five elixirs and two throwable flasks. Previously undefined Dazed and Blinded effects now have rules.
- Added status icons and item models/icons for the new consumables, with recipes and merchant stock.
- Equipment generation favors the hero's class in monster drops, chests, caches, mimics, set/unique rolls and class-aware shops. The class-hinted selection uses a 72% preference branch while allowing other equipment to appear.
- Added the single-player quake team command for up to three AI hero allies. Allies use class skills, follow and fight, drink potions, buy and equip improvements in town, sell replaced gear and bind a Tempo. Their gear, gold and progression are saved; defeated allies recover after 14 seconds.
- Added Enchantment at alchemy tables: rank I-III elemental runes with 20/30/40% conversion and additional bonuses. Added Fore-Tech at forges: mechanical weapon refits from +1 to +5, giving 2% weapon damage per rank plus a refit effect. Both upgrade types can coexist on a weapon and appear in crafting screens and tooltips.
- Added custom guild names and banners. Names support up to 32 characters with unsafe formatting removed; PNG/JPG/WebP images are cropped to a 2:3 banner and stored with the hero. The banner appears in the customization window, Character window and Guild House.

Sources: [work/lemondev/bh-017/handoff.md](#) and the commit diff. The earlier handoff notes that remote players' custom guild banners are not displayed, and the phone file picker had not been tested.

BH-018 - Socketing, crystals and town redesign

Continued local update, included in the current completion release.

- Added 32 socket crystals: Ember, Aqua, Nova, Thundra, Vipera, Bloodrift, Essencerift and Aetherift, each in Fragment, Shard, Crystalline and Orbital grades. Added their models, inventory icons, grade colors, descriptions and effects.
- Crystal effects depend on the equipment: weapons, armor/shields or jewelry. Bloodrift and Essencerift fit weapons only. Aetherift adds rare effects: chain lightning after critical attacks, protection at low health, or cooldown reduction after critical hits; its Orbital jewelry form also grants a skill level.
- Added socket specialists Ysolde Marr in Malasugue, Anselm Cray in Olivar and Dagna Flint in Wyman. Their conversations explain sockets and open the service window or crystal shop.
- Added services to open sockets, close empty sockets, set a crystal for free, purge crystals while keeping the equipment, and crystallize equipment to recover its crystals. Destructive services require confirmation. Worn items update stats; socket contents persist in saves and trades.
- Maximum sockets by equipment tier: Beginner/Common 1; Basic 2; Advanced/Licensed 3; Elite 4; Master 5; Mythical/Legendary 6; Aether 7. Opening additional sockets gets more expensive as item level and socket count increase.
- Bosses always add a crystal drop. Champions/minibosses drop Fragments or Shards. Aetherift is rarer than the other families. Specialist shops carry unlimited level-gated crystals; normal base prices are 5,000 / 15,000 / 45,000 / 135,000 gold by grade, with Aetherift at three times those values. Merchant relationship modifiers can alter final prices.
- Doubled carrying capacity: base 55 to 110, Strength contribution 1.6 to 3.2, and Featherweight Draught capacity bonus 60 to 120.
- Replaced generic merchant stands with distinct medieval shop and crafting models, revised the three town quarters and removed the old freestanding signs. Updated map locations, minimap icons, dialogue and guide entries.
- Fixed elevated dungeon-gate approaches with sloped, walkable aprons. Updated related gate and town layout tests.
- Multiplayer protocol advanced to 6 so older clients cannot silently discard crystals or socket data in trades. Added an item catalogue and socket/crystal tooltips.

BH-019 - Lape, practice dummies and shared storage

Continued local update, included in the current completion release.

- Added Lape the Ancient in Malasugue with a dedicated portrait, relic stall, dialogue and trading window. His completed character model has a black hooded robe, white beard and large staff; six townsfolk animation clips were exported and checked.
- Lape accepts up to three items for appraisal, identifies their properties and requirements, and uses more than 300 authored comments. Eligible trades offer three class-appropriate, licensed, specially crafted equipment choices. The player chooses one item or takes the appraised gold; the submitted items are exchanged only when the trade is accepted. Low-value lots can be exchanged for gold without crafted offers.
- Added practice dummies to Malasugue, Olivar and Wyman. They accept attacks without dying or fighting back, rock when hit, show damage numbers and report the last hit, largest hit, five-second damage per second and bout total. They are excluded from normal enemy targeting by companions and the minimap.
- Added the Hero's Vault, shared across the player's saved heroes on the device. It starts with 32 slots; 2,500 gold expands it to 64 and a further 8,000 gold expands it to 128. Deposits, withdrawals, upgrades and saved item data are supported. Quest items stay with their hero. Tests and captures use a separate vault file.
- Added vault and dummy models and dedicated interaction screens. Updated town placement, minimap entries, guide text and descriptions.
- Renamed four shopkeepers: Tovin to Anton, Hobb to Gregggy, Corvin to Taicho, and Aldous Pell to Angkol Les. Updated their dialogue and shop names.

Sources: `game/src/core/items/lape_trade.gd`, `game/src/core/items/hero_vault.gd`, `game/src/world/practice_dummy.gd`, `game/src/data/data_npcs_lape.gd`, `game/src/data/data_lape_lines.gd`, and `game/tests/unit/test_bh019.gd`.

BH-020 - Completion and usability fixes

Current completion update, 29 September 2026.

- Fixed the specialist conversation handoff: closing dialogue cleared the NPC before the deferred socket window could read its name and shop. The handoff now captures both first, so Buy Crystals opens the correct merchant in every town.
- Shop stock now supports click or tap as well as right-click purchases, retaining confirmation for expensive items. Opening another merchant resets Buyback and category filters so earlier selections cannot hide crystals.
- Existing shop saves now recover missing unlimited stock and add newly unlocked level-gated goods when reopened, while retaining finite stock, buyback items and purchased-special history.
- Nearby NPC, crafting, vault and practice labels render in front of world geometry. Companion labels sit higher and render above their health bars. This resolves the names cut off by shop roofs and bars in the reported view.
- Completed the remaining source-to-model exports, including Lape and updated smithy, wagon, Wyman and crafting assets.
- Corrected four town route endpoints to match relocated destinations. Updated the sanctuary population test to include Ysolde and Lape.
- Added regression coverage for the real dialogue-to-socket-window-to-shop flow at all three specialists, confirmation and gold charging, stale filters, and saved-stock recovery. Updated the visual capture to use the same dialogue and Buy Crystals path as players.

Validation and build details are recorded in `work/lemondev/bh-020/handoff.md` and its evidence folder. Windows and Android build outputs are provided separately from source control. The APK uses the project's existing debug signing configuration; physical-device testing is reported separately from a successful build.
